

# Module 1C Worksheet

---

*Calculate how many shares you can offer*

A: I will have \_\_\_\_\_ animals lactating

B: My average daily milk yield per animal is: \_\_\_\_\_

(those with multiple breeds should take variable yields into account)

C: cow share volume = 1 gallon      goat share volume = 0.5 gallon

**Formula:**       $(A-1) \times (B) \times (C) \times 7 = \text{total shares}$

Now divide by 2

**I can offer \_\_\_\_\_ shares in the first year of my herdshare program.**

Notes, thoughts, and questions to ask:
