

Build your farm website in 90 minutes

Module 6: Domain and Website Hosting

Upgrading to a customized web address (Domain) and ad-free hosting

Click on 'Upgrade'

Wix will walk you through choosing your package. While you could do the free version, I STRONGLY discourage it. Your farm is a business, right?

Nothing says 'Our farm is new/inexperienced/cheap' like a subdomain name or ad banners. If you just want to build it for free, stick with the yourid.wixsite.com/mysite - you can always add the domain and pay for the upgraded hosting later.

If you want to sell strictly offline/Google Survey/etc, go for the website options - Combo is the least expensive option without ads. It comes with a free domain for a year!

If you want to sell both offline as well as having an online store, Business Basic is a good place to start. It comes with a free domain for a year!

****TIP** if you've been building your website over a couple of days or weeks (no judgment there), check your Promotions/Spam for sales emails from Wix - they often run 50% off promotions.**

Pick your domain carefully - pay for hosting without ads, and for the right kind of domain.

Domain

- choose i.e. www.yourfarmname.com
- if they don't have your farm name available, add the state, county, or another short addition. We did www.beeskneesfarmkw.com (kw = King William, where our farm is located) because beeskneesfarm.com was taken.

- Stick with .com if possible, .net if you must, but no other suffixes.
